Assignment 02 - RESTful API Service

Assignment - Problem Statement

Name: K. Sushanth Sai Krishna Roll No: A24126552152 Date: _____

Problem Description

Build a RESTful Expenses API using Node.js and Express that supports full CRUD operations with validation, filtering, a summary endpoint and proper HTTP status codes.

Requirements

- Endpoints: GET /expenses, GET /expenses/:id, POST /expenses, PUT /expenses/:id, DELETE /expenses/:id
- Support filtering using query strings (?category= and ?min=)
- GET /expenses/summary returns the overall total and the total per category
- Validate the title, a positive amount and the category (Food, Travel, Bills, Shopping, Other); return 400 on bad input
- Return 404 when an expense does not exist and 204 on a successful delete
- Test every endpoint with Postman

Deliverables

- Source code in src/
- Postman test screenshot in screenshots/
- package.json with start script
